

CASE STUDY

Rhino Mobility Powers Remote Recovery for Substance Use Disorder

OVERVIEW

VeeOne Health and Rhino Mobility teamed up on CravAlert, a remote monitoring solution to combat opioid relapse. Rhino provided secure Android devices enabling real-time data and peer engagement for a deployment in West Virginia, cutting overdose deaths by 40% and reducing relapse rates to just 2%.

KEY

40% Reduction in overdose deaths.

2% Relapse rate compared to the 40% national average.

100% Peer support interventions were successful in preventing immediate

CHALLENGE

VeeOne Health needed a reliable medical gateway solution to support addiction recovery in rural West Virginia, where limited access to care, high relapse rates, and unpredictable overdoses posed critical challenges. The program demanded always-connected, secure mobile devices capable of real-time biometric data transmission, even in areas with poor network coverage.

SOLUTION

Rhino Mobility provided RHINO C6 devices that are Android Enterprise Recommended, enterprise-grade, and certified across all major carrier networks. They offered secure data transmission, reliable rural connectivity, and centralized remote management to support real-time monitoring and peer-driven addiction recovery.

Purpose-Built Android Devices:

Rhino Mobility delivered the RHINO C6, a mobile gateway device designed to pair seamlessly with a wearable biopatch. Together, they enable secure data transmission and support HIPAA-compliant healthcare monitoring solutions.

Reliable Connectivity:

To overcome coverage challenges in remote regions, the CravAlert leveraged KORE's OmniSIM multi-carrier technology, enabling it to automatically connect to the strongest available cellular network.

Full Device Management:

The devices supported Android Zero-Touch enrollment, remote management, and compliance tracking, giving healthcare teams centralized control over deployment while ensuring privacy, security, and system integrity.

CONCLUSION

Rhino Mobility's RHINO C6 powered CravAlert with secure, always-connected hardware, helping VeeOne Health and partners deliver lifesaving addiction recovery support.

RHINO C6 used by VeeOne Health.
